

The MobiControl 12.3 release strengthens SOTI's technology alignment with Tier 1 OEM partners by introducing support for the latest mobile platforms from Microsoft® and Google® and enhanced support for Apple® Enterprise Programs. This release introduces same-day support for Windows® 10 across desktop and mobile, enhancements to Android for Work support, and implements management of the Apple Volume Purchase Program (VPP) for institutional and enterprise use.

### Do More With Windows 10

Windows 10 is Microsoft's evolution of Windows into a unified platform for end-user computing in the enterprise. Windows 10 redefines enterprise computing, with an emphasis on one way of working across desktop and mobile devices.

- 12.3 significantly strengthens SOTI's support for the Windows platform and brings advanced management capabilities for enterprise IT departments deploying Windows 10 on mobile and desktop.
- Many of the same advanced MobiControl features previously exclusive to Windows Phone devices are now supported across Windows 10 mobile and desktop endpoints.
- With MobiControl 12.3, enterprise IT can confidently manage Windows 10 in their organization with a single solution.

### New Additions to Android for Work with SOTI

The 12.3 release introduces a number of improvements for Google's Android for Work, focused on providing enhanced security, improved user experience and increased policy controls designed to simplify app distribution and account management, including:

- Pulse Secure VPN Support
- EMM Account Enforcement
- Google Play Private App Support
- Streamlined User Experience

### Apple Volume Purchase Program (VPP)

SOTI MobiControl now provides enhanced support for the Apple Volume Purchase Program (VPP). Apple Volume Purchase Program (VPP) is a key pillar of Apple's Enterprise and Education programs, targeted at organizations that need to distribute volumes of iOS apps to corporate-owned or employee-owned iPhones and iPads.

- Enterprises now have a simple, convenient way of managing the purchase and distribution of app licenses at scale.
- VPP allows organizations to purchase bulk app licenses and distribute these licenses to end-user devices.
- VPP allows enterprises to distribute both App Store apps and custom B2B apps developed by a third-party developer.
